

# Our joint work with Kalle

László Márki

Alfréd Rényi Institute of Mathematics

Budapest, Hungary

In this talk I will present a survey of our joint work with Kalle. All our work concerns investigations of questions coming from universal algebra in certain algebraic structures. These questions are affine completeness of semilattices and of commutative inverse semigroups, endoprimality of abelian groups, and bi-congruences of finite minimal algebras generating arithmetical varieties.
